

What is a DDI?

A Diverging Diamond Interchange (DDI) crosses traffic to the opposite side of the road across an interchange so vehicles have unimpeded movements onto the freeway ramps. Left-turn movements, which are a typical challenge with standard four-way interchanges, are eliminated with a DDI.

Help us welcome Greg A. Martinez, CDOT's ADA Title II Specialist as he discusses how this 3-D model was made and why it is so important to all pedestrians navigating this intersection from both the Town of Superior and the City of Louisville.

- o Date: Monday, October 16, 2017
- o Time: 10:30 am
- o Place: City of Louisville Library, 951 Spruce St. Louisville, Co 80027
